## **MEDIA RELEASE**

**18 February 2022**

City Power would like to notify its customers fed from Eikenhof substation of the Planned Maintenance scheduled for Saturday, 19 February from 07:00 until 15:00.

The first part of the maintenance was supposed to have been done on the 5th of February but was cancelled due to the concerns raised by Rand Water and Joburg Water at a meeting with City Power about the impact this will have on water supply with their reservoirs running low.

City Power supplies Rand Water with electricity to run its pump station in Eikenhof, South of Johannesburg. The pump station supplies Water to several municipalities including Mogale City, Joburg, and parts of the Madibeng in the North West.

Apart from Rand Water Board, other City Power customers who will be affected include residents of Meredale, Kibler Park, Naturena, among others.

The planned maintenance at Eikenhof substation is scheduled for two days, with the second one expected to be carried out early March to give Rand Water a chance to recover.

We want to emphasize as City Power that routine maintenance of our infrastructure is important to ensure the network performs efficiently at its optimal and to avoid total breakdown of the substation. We therefore cannot postpone the maintenance any further.

We apologise for the inconvenience caused by this.
